

# Did you play football in high school??

Are you currently age 40-65?

**Research participants needed!!**

The departments of Psychology & Kinesiology at the **University of Georgia** are currently recruiting participants for a study examining concussion in ex-high school football players.

**This study will:**

- 1) help identify cognitive changes associated with a history of concussions.
- 2) examine brain structure/function in people with and without a history of concussions.
- 3) assess the permanence of concussive injuries using multiple types of information.

Recruiting males who do and do not have a history of concussion(s)!

- Males between 40-65 years of age
- Right-handed
- Will participate in 2 sessions that involve cognitive testing and an MRI scan
- Participants will receive \$50 for their time and efforts.
